HELICAT 22

The HeliCat 22 is a cool-looking catamaran designed and built for rough water -- great for stable & safe, fun, fast, economical and practical water travel, island transport, resort adventure tours (with 4 side facing jump seats with seat belts), "the bass boat for rough water", or day charter. Wrap her with your company logo, photos & contact info for eye-catching and fun advertising on and off the water.

Open air feel and thrill like a motorcycle but without the traffic danger! Cruises 20-30 mph in whitecap waves at 5 mpg--not possible in other boats. It is very safe in very rough water conditions because waves can wash over the boat and there is no place to store the water like a typical boat cockpit and it has two independent motor/fuel/electrical systems for redundancy. It can go 15 kn with one motor.

The new design makes this cool-looking, lightweight, stable and agile catamaran safe in rough seas, and a lot of fun with great fuel economy and near zero maintenance. Side vinyl doors keep you totally dry.

At speeds from 20-45, she burns only 4-13 gph, getting 5 to 3.5 miles per gallon, which is unusually good for a boat that can handle rough water. Combined with her stability, it makes commuting on the water practical and economical.

She has been tested in whitecap waves under the Tacoma Narrows Bridge and found to be very stable and relatively smooth at 30 mph--see videos. The boat's top speed is about 40 mph with twin 60hp Mercury four stroke EFI motors and faster with 90 hp.

The HeliCat can be ordered with 60-90 hp motors of your choice or sold alone for you to select your own motors. A

custom Aluminum Trailer with LED lights and disc brakes is available and usually included. She can be towed by a mid-sized car or small SUV, because she will be under 3,400 pounds on the trailer full of fuel and gear, ready to go anywhere.

Easy & Safe Self Trailer launching and retrieving - under 1 minute by yourself without gymnastics or risk of falling.

The HeliCat will take you places you've never been

Highly versatile & customizable for: island-travel, resort adventure tours, beach rescue boats, marine advertising & businesses ... or just plain fun

Technical Specifications

Length	21.5 Feet (6 Meters)
Beam	8.5 or 10 Feet
Draft	18 Inches
Weight (No Motors)	1,600 lb (730 kg)
Weight (Two 60Hp Motors)	2,200 lb (1,000 kg)
Top Speed (60 hp Motors)	38 Mph
Top Speed (90 hp Motors)	30 Mph
Top Speed (White Caps)	43 Mph
Range	>100 Miles (160 km)
Towing Weight	3,300 All inclusive

What do people use HeliCats for?

- FUN! While also drawing attention to your business.
- Water travel to Islands, marine businesses.
- Resort adventure tours [3-7 seats], water taxis [3+ seats].
- Beach rescue boats.
- Fishing - like a bass boat for rough water.
- Remote Kayaking - take your kayaks to remote places fast.
- Wakeboarding or new sport -- Extreme Wakeboarding in waves.
- Offshore SCUBA diving platform.
- Parasail to be tested soon.

It looks like it could take off – Does it lift off the water?

Everywhere I take the prototype, I am asked this question. No, it does not fly. It is a catamaran [2 hull] boat and only the front part of the hulls lift at higher speeds. However, it does feel like you are flying at 30 mph in whitecap waves.

How can I buy a HeliCat?
